EXPERIENCE

- **Software Developer Intern**
Absolute Electronics Services (Addison, IL) *Sept 2025 – Present*
 - Develop and maintain custom ERP modules using Angular, TypeScript, Node.js, and Express, improving manufacturing workflows and reducing manual processing time by 30%.
 - Integrate QuickBooks for automated accounting data synchronization.
 - Leverage AI-assisted development tools for planning, design, and code generation to improve development efficiency.
 - Deploy and manage the ERP application on AWS (EC2), handling environment configuration and performance monitoring.
 - Work with internal users to gather requirements, translate them into technical solutions, and deliver new features.
 - Assist in user training and documentation, supporting onboarding and ensuring successful adoption of ERP features.
- **Project Data Engineer Intern**
Endeavor Inspired Infrastructure (Darien, CT) *May 2024 – Aug 2024*
 - Led the development of scalable data pipelines by integrating data from CRM and project tracking tools, improving project delivery efficiency by 30%.
 - Applied advanced data modeling and implemented validation protocols to ensure high data integrity and scalable system performance across enterprise workflows.
 - Utilized Azure Cosmos DB and Gremlin graph queries to enhance ETL pipelines, reducing data retrieval time by 40% and improving end-user access to insights.
- **Computer Specialist**
UIC Technology Solutions (Chicago, IL) *May 2022-May 2025*
 - Provided technical support to over 150 faculty and staff, resolving issues related to hardware, software, networking, and printers across 5+ academic departments.
 - Managed 100+ user accounts and enforced access control policies, helping maintain secure and compliant university IT systems.

EDUCATION

BS in Computer Science with Minor in Management Information Systems *Aug 2021 – May 2025*
University of Illinois at Chicago | Chicago, IL
Coursework: Data Structures, Software Design, Computer Design, Machine Learning, Software Engineering 1 & 2, Database System

PROJECTS

- **AgriMitra (Python):** *Jan 2025 – May 2025*
 - Developed an AI-powered waste management platform using Flask, React, OpenAI, and weather APIs to provide real-time disposal guidance and alerts for rural communities.
 - Designed a chatbot interface inspired by agentic AI concepts, aiming for proactive assistance by integrating weather-based triggers and contextual recommendations.
 - Built a scalable MongoDB backend for handling dynamic waste data, improving user engagement and interaction accuracy across varied agricultural conditions.
- **Finance Guru (MERN Stack):** *Jan 2024 – May 2024*
 - Built and deployed a financial planning assistant using OpenAI, Node.js, and React, offering budgeting tools, investment advice, and retirement projections.
 - Implemented intelligent prompts and behavior modeling to simulate early agentic AI features, allowing the system to suggest financial tips based on user trends.
 - Secured user data with encrypted MongoDB storage, Google OAuth, and robust session management to ensure compliance and data privacy.
- **Campus Map Navigation Program (C++):** *Aug 2023 – Dec 2023*
 - Built a console-based campus map navigation tool using C++ and graph data structures to model buildings and footways.
 - Integrated Dijkstra's algorithm to calculate the shortest weighted paths between any two locations on campus.
 - Enhanced user experience by implementing midpoint logic to suggest convenient meeting spots between selected buildings.

SKILLS

Python, JavaScript, Java, C++, C#, Cursor, Claude code, GitHub Copilot, Prompt engineering, HTML/CSS, React, Node.js, Express.js, GraphQL, Django, Flask, MySQL, PostgreSQL, MongoDB, DynamoDB, PowerBI, Pandas, Numpy, Scikit-learn, OpenAI, AWS (EC2, S3, Lambda, RDS, DynamoDB, CloudWatch, IAM), Azure, Docker, Git, REST APIs, Jira
